

MILESTONE 4: UI Development

This milestone focuses on developing a **lightweight, responsive, and intuitive frontend** for **PocketSmart AI** using **HTML, CSS, and Jinja2 templates**. The interface enables users to interact seamlessly with the system's budget-based recommendation capabilities across Home Interior, Party Planning, and Jewelry categories. It is tightly integrated with FastAPI backend endpoints to facilitate real-time input and AI-powered output rendering. The goal is to maintain a clean, user-friendly design that supports multi-category inputs, displays structured AI recommendations, and includes authentication and session-based personalization.

Activity 4.1: Develop HTML Frontend Interface

- Design a home page with budget input fields and category selectors (Home, Party, Jewelry)
- Implement individual forms for each planner module connected to FastAPI POST routes
- Display AI responses in well-structured, card-like layouts (e.g., product suggestions, item details, prices)
